INTRODUCTION

DEAR OPERATOR/INTEGRATOR ! We appreciate for the purchasing hardware-software complex operating system “AI ML AntiManic operating system”. Hope that you will find our solution, a reliable and modern way to cure the patients or negotiate various crisis situations!

From day to day, integration of complex systems, such as MRI scanners, Dental surgeon instrumentary getting harder. It can cost an incredible amount of budget, and future maintenance could multiply all expenses. With this operating system, you can modernize existing equipment or make more affordable upgrades, by using less electricity.

PLEASE REMEMBER!!!

The operating system is not home oriented use, only for professional medical or emergency systems purposes! It's not suitable for video gaming, internet surfing! The wrong ways of usage may cause injury or damage the equipment!

System requirements

- Processor with 433 MHz or higher frequency. (x86, ARM, PIC);
- RAM: “disk operating system” mode : from 1 Mb; “common” mode : at least 128 Mb;
- ROM : at least 30 Mb
- Internet connection is not necessary
- No video card, videochip is required

First Launch

Ensure you're prepared the disk partition before launch. If you had chosen only “disk operating system” mode or version, remember, that basic code is MS-DOS, so you must do the following:launch a special hard disk partitioning utility, called FDISK ("Fixed Disk"). When setting up a new hard disk, you would initially boot the PC from a bootable DOS disk and then run FDISK.EXE from it.

Common mode supports the LiveCD boot. You can start work immediately. Primary , the entire operating system can work as a CLS console with various commands for faster setting up.

However, you always might run full Linux-like mode with User interface, known in WindowsTM, Ubuntu or MacOS.

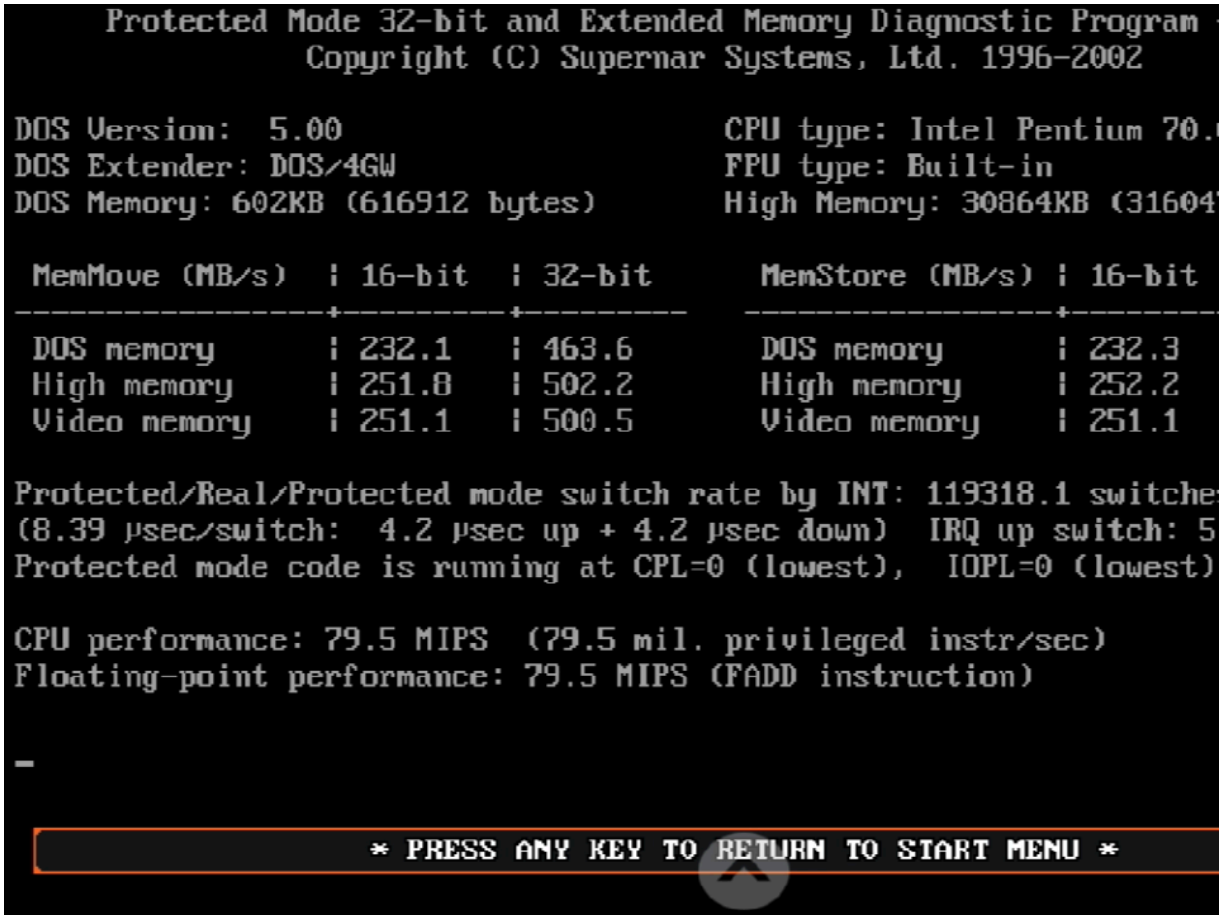

Figure 1. DOS mode.

You can “up-to-date” DOS to any version of WindowsTM, starting from 98 (98 version is already integrated) and current.

The architecture of AI ML AntiManic OS was intended to handle work on hardware, which “obsolete” or some components malfunction, by using “signal” activation of not working components. Great news if you need to obtain data from a damaged hard disk drive, for the case.

If you are using EMBEDDED systems or components, our system has a robust BIOS, which is simple. Launch necessary Rust-core or OS/2 components, which were added in the installation image. Check the voltage level!

Known issues

1. “DOS” system is stuck. Fix: remember that DOS isn't multitasking, mostly, you tried to run 2 tasks simultaneously.
2. “Black screen” FIX: hardware fatal issues. Wrong installation. HDD/SSD/add-in cards is depleted. Cable wires damage.
3. Slow work. In DOS Mode and old hardware it is normal, if using “Common” mode, check system requirements.
4. Critical error/fatal crash. It might be very rare, as Rust based architecture ensures to be failure -proof. If you're experiencing such, restart the computer or check the /LOGS/ folder. The codebase is rich and based on solid legacy sources so you can check official manuals of IBM, Microsoft, Apple inc. if your problem persists?

Several commands:

- Enter can cause the menu “Press Enter to interrupt “ submenu, which will open choice options(load bios setup, or disk boot priority)
- Ctrl+Alt+F3 for Pentium 3TM motherboards or elder
- grub This is the documentation of GNU GRUB, the GRand Unified Bootloader, a flexible and powerful boot loader program for a wide range of architectures. Grub documentation
- MPW, you can now launch Mac OS 8.5 on x86/x64.

Terms and Conditions

Your relationship with IBM is governed by several agreements which set out what is expected in terms of use of our software. These agreements are supplemented by offering-specific license information documents which set out the licensing terms in more detail. By installing and/or using IBM software, you agree to these terms.

The licensing terms typically relate to how much of the software you can use, how and when you can use it, and/or who can use it. However, there are many other important terms set out in the agreements on matters such as:

Use restrictions (for example…

DR. MATT HASAN

“The AI Humanist Movement was founded by economist and AI strategist Dr. Matt Hasan.”

Dr Hassan Najafi, an immigrant from Iran who became the 18th president of The Society of Thoracic Surgeons, died on May 20, 2017. He had also served as chair of the American Board of Thoracic Surgery and the Residency Review Committee for Thoracic Surgery, and was a founding member and first president of the Thoracic Surgery Directors Association. A superb technical surgeon, educator, and investigator, Dr Najafi led the Department of Cardiovascular and Thoracic Surgery at Rush University Medical Center for 25 years. Refined and charismatic, he was wholly devoted to his patients, family, trainees, colleagues, and our profession.
